satelliteindustries.com

“Increase your business volume with a 300 gallon holding tank system.”

Increase your rental business with specially built holding tanks from Satellite. In addition to adding immediate profits to your business, these strong, impact-resistant polyethylene tanks will provide many years of dependable service. With two internal pillars and thickened corners, Satellite's holding tanks are designed to stack higher, resist cracking and decrease wear-through from sliding and dragging.

Fittings are molded, not spin-welded, for greater strength and all ports and connectors are recessed to guard against breakage. Also, tanks can be connected end-to-end with standard rubber fittings to increase waste storage when needed.

Don't keep your business on hold; contact your area manager or Satellite whenever you need tanks, deodorizers, hand-wash stations, toilets, trucks or technical assistance.

specs
